Finals Section 3 - Case Study Information Pack

Section 3: Case Study – The 500

40 mins available for this Section

INTRODUCTION

You are an analyst at a consulting company, The 500, which provides advice to S&P 500 companies on how to improve their performance and share price.

Your boss comes to you with the following request:

"I often get last minute meetings with senior executives at these companies and need to quickly understand the firm's financial performance, position, share price and get insight into key financial trends in the firm. It would also be useful to understand how they are performing against their peers. We have a database of the key information, and what I need is an Excel tool where I can select the company I am going to meet with and get a one-page summary of this information. Can you build this for me? Also, I need it in 40 minutes. Thanks."

Further details on the information contained in the 'database' is provided on the next page.

YOUR TASK

You have to develop a spreadsheet tool to meet your boss's requirements. In developing the tool you should use the company's logo and consider the company's color scheme: black, grey, blue and yellow. These have been provided to you on the 'Logo' sheet.

You will need to consider the best way to present the information available to meet your boss's requirements. If desired, VBA may be used.

SCORING

The tool you develop will be assessed and scored by the judging panel. In allocating their score, the judging panel will take into consideration the user experience, design and presentation of your tool, as described in your boss's requirements. The judges have no more specific guidance than that, so try and 'wow' them. The judges will be marking a digital copy of your workbook, not a printout, and therefore you are able to make your workbook interactive.

The ModelOff Question Design Team will assess your solution to confirm it is accurate.
